

Monthly Market Snapshot

August 2021

The Monthly Market Snapshot publication provides commentary on the global economy and the performance of financial markets

Market Commentary

Globally, the reopening and rebound of economic activity continued in August. However, although some economic data, such as the purchasing managers index (PMI) manufacturing survey, remains very strong it is starting to retrace from the peak growth levels earlier in the year.

Equity markets in all major regions produced positive returns in August. Early in the month, there was some continued weakness in Chinese equities but returns later rebounded to produce a strong positive return for the month overall.

The Delta variant of COVID-19 continues to spread and new cases have been rising. In Europe and the UK, vaccination levels have meant that hospitalisation rates have not risen at the same rate as previous waves. But in the US, where vaccination levels are not as high, particularly in certain states, hospitalisation rates are increasing more sharply.

In Australia, the spread of the Delta variant, has resulted in heavy lockdowns in the two most populous states of New South Wales and Victoria. The lockdowns have resulted in a sharp slow down in economic activity. However, the Australian equity market still produced a solid positive return in August. Market returns benefited from the takeover of Afterpay by US company Square for around \$40 billion, in the largest takeover in Australian history. Conversely the Resources sector produced a large negative return in August, as the oil price and other commodity prices, specifically the iron ore price, continued to decline with slowing economic growth in China.

Real assets, particularly Australian listed property, also had positive returns in August.

At its Jackson Hole symposium, the US Federal Reserve Chairman, Jerome Powell, advised that given “substantial further progress” in the economic rebound he believes tapering of some of the monetary support should occur this year, but that interest rates will not be raised in the near-term.

During August, Australian government bond yields declined a small amount, while international bond yields, including in the US, increased by a small amount. Australian 10-year government bonds yields are at a discount to US 10-year bonds yields, compared to at the start of the financial year when Australian bond yields were at a premium to the US.

The result of the bond yield movements was a very small positive return for Australian bonds and a small negative return for international bonds.

The AUD fell again against all major currencies in August, with the exception of the GBP which was weak over the month.
